

NHS 1 October Briefing — Speaker Script (30 min)

NHS 1 OCTOBER BRIEFING — SPEAKER SCRIPT (30 min total)

Darren Birch · ZEUS AI Intelligence · All IP belongs to JDB Sales

Timing: S1 0:30 · S2 2:00 · S3 3:00 · S4 2:00 · S5 3:00 · S6 3:00 · S7 3:00 · S8 2:00 · S9 2:00 · S10 2:00 · S11 3:00 · S12 1:00 · Q&A rest

SLIDE 1

[OPEN — 30 seconds] Good afternoon and thank you for the time. I'm Darren Birch, founder of ZEUS AI Intelligence. This is a 30-minute briefing on a partnership, not a procurement: how the UK's existing identity layers gain their missing fourth layer — a national credential on a secure rail — secured end-to-end by our live AEGIS security platform. All IP in this programme belongs to JDB Sales, licensed to our UK holding company.

SLIDE 2

[CONTEXT — 2 min] Set the frame before numbers: the NHS already has the App (39m+ users), NHS Login, and the NHS Number — three of the four layers of a national identity. The missing fourth is a national credential: a mobile secure-enclave plus a low-cost physical token for those who can't use a phone. Estonia is the proof this works: 98% ID coverage, 99% of health processes digital, 1,345 years of citizen time saved per year. And we are ready now: DIATF alpha design exists, OfDIA and the ICO have been pre-notified, both certifying bodies are engaged, and AEGIS is live and tested.

SLIDE 3

[ESTONIA — 3 min] Give the comparator teeth. 98% card coverage, 99% health digital, 100% e-prescriptions, 1,345 years saved. Then the three economic lessons: the card is a low-cost public utility — value comes from the permissions economy at the edges (e-Residency returned ~EUR 125m in a single year); identity was built BEFORE health (the EHR rode the 2002 card); and X-Road means no central mega-database — the once-only principle is law. Same philosophy, tailored to the UK.

SLIDE 4

[FOUNDATION — 2 min] Walk the four layers. 1 NHS App — the digital front door. 2 NHS Login — the national identity service for health. 3 NHS Number — the universal identifier plus staff Care Identity Service. 4 — the missing piece we build: the National Credential on a secure rail. The fourth layer unlocks once-only, citizen audit rights, and a single trusted key to public services. This is a layer over what exists — nothing is replaced, nothing is ripped out.

SLIDE 5

[PARTNERSHIP — 3 min] This is the philosophy slide. We are a single accountable delivery partner; IP stays with JDB Sales, licensed to the holding company. Hybrid credential: physical smart card + wallet/app for ~50 million citizens. AEGIS is woven through — live, tested, DIATF/DSPT/DTAC-ready — which avoids a 3-5 year bespoke security build. Estonia is the proven comparator. And revenue is honest: ~£24.4bn ten-year value, ~£155-360m programme cost, ~28x ROI — with a permission-economy revenue stream at the edges (verification APIs). Certified UK/EU bureaus and HSMS handle physical manufacturing at volume.

SLIDE 6

[PROGRAMME 01 — 3 min] The core programme. 50 million smart cards + app; £24.4bn ten-year value; 28.2x projected ROI. Hybrid credential: mobile secure-enclave for the majority, low-cost physical token for the digitally excluded — nobody left behind. Two mandates worth emphasising: the citizen transparency mandate (every data access logged, one-touch red-flag to the ICO) and once-only by law (the state may not ask for information it already holds). Built to DIATF gamma 0.4 rules from day one.

SLIDE 7

[PROGRAMME 02 — AEGIS — 3 min] This is what nobody else in the room has. AEGIS is live today: 8 security modules, 37 endpoints, 24 defence layers, 8/8 audit findings fixed. It covers all 7 AI attack vectors — prompt injection, agent authorisation, MCP gateway, RAG, supply chain, model extraction, vector security. A 24/7 AI guardian that detects, blocks, reports — producing the audit evidence regulators want. GDPR/CE-ready, DSPT self-assessed, API-first, live in days. Independently tested live: 27/27 injection blocks, zero false positives; auth enforced 401/401/200.

SLIDE 8

[COMPLIANCE — 2 min] The path is real, not aspirational. DIATF gamma 0.4: alpha built to government rules; certification with BSI/Kantara in motion. OfDIA + ICO: pre-notification sent 27 Aug, DPIA in progress, ICO register reference ZC230615. Both CABs — BSI and Kantara — engaged. DSPT v8 / DTAC v2: AEGIS self-assessed, evidence pack in place. And the GOV.UK digital identity register entry is prepared for post-certification. If asked: we're doing this ourselves, we're not looking for the certification to be done for us.

SLIDE 9

[ROADMAP — 2 min] Four phases, every one gated on evidence. 2026: engage and plan — partnership, DIATF sandbox, RFI responses, certification kick-off. 2026-27: the pilot — regional issuance (card + app), AEGIS live, bureau contracts, CMS + HSM. 2027-29: scale — national rollout of 50M, wallet + attributes, cross-sector joins. 2029-30: the ecosystem — permissions economy, GOV.UK One Login, full coverage. No phase moves without certification, pilots, compliance, and live deployments.

SLIDE 10

[COMMERCIAL — 2 min] Honest economics. AEGIS is commercial today: Essentials £5,000 · Advanced £30,000 · Enterprise £100,000 per year — that funding keeps the corridor alive while the programme certifies and pilots. The licensing model: JDB Sales owns the IP, licences to the holding company; per-card, per-user, per-API transaction licensing at scale. And the NHS value: reduced duplicated data, freed clinical time, citizen empowerment, a consent-first and audit-visible health identity.

SLIDE 11

[THE ASK — 3 min] Close with four concrete asks. One: agree the partnership model — supplier-of-record or licensed delivery partner — with NHS England commercial. Two: sponsor a DIATF-compliant identity wallet plus AEGIS security pilot within Product & Platforms. Three: route through DHSC / NHS England commercial for a funded programme — the £24.4bn / 28x ROI case is on the table. Four: stand up a data & security working group — AEGIS plus NHS cyber — to run the DTAC/DSPT evidence. Ask which of the four they'd like to move first.

SLIDE 12

[CLOSE — 1 min] Thank them. One sentence summary: the identity-first future for the NHS, secured end to end by AEGIS — a partnership, a pilot, and a proven blueprint. Offer the leave-behind (one pager) and the NDA if they want the architecture detail. Give your contact: jdbsale3@gmail.com, 01922 445318. Invite next steps within two weeks.

END — offer leave-behind + NDA; follow up within 2 weeks.
